

Professional Services for Software Development

Based in Irvine, CA, Netaphor provides software development services and tools for developing management solutions to Fortune 1000 companies such as Canon, Cisco, 3Com, Konica Minolta, and Toshiba. Storage and imaging vendors, such as Quantum Corporation and Konica Minolta, bundle our MetaConsole product with their hardware.

Highlights

SBA 8(a)
Design & Implementation
Java, C/C++/C#
.NET Development
SNMP & Network Management
Integration with Unicenter,
OpenView, & NetView
Windows/UNIX/LINUX
Database Middleware
Embedded Systems
Real-time systems

"Using Netaphor's products and services gives us a time-to-market advantage in providing our management aggregation benefits to the marketplace." – Vladimir Miloushev, CTO, Z-Force, Inc.

Do you need to develop a management application? Accessing a SQL Server or MySQL database? Integrating with HP OpenView, IBM NetView, or CA Unicenter? Need to create an application that has a small footprint and can be embedded?

Netaphor has the resources and skills necessary to help you with your software development. Netaphor has been serving Fortune 1000 companies for the last 6 years building custom software solutions, designing new architectures and integrating with enterprise applications.

Our clients seek Netaphor's service when serious time constraints may cause a market window to close for them. Netaphor helps its clients by creating next generation products and technology in a manner that addresses these time-to-market issues in a cost effective way.

Our Expertise

Netaphor's engineers are skilled in a variety of programming languages from C/C++ to Java and C# for .NET development. We work on a variety of platforms from Windows for desktops to UNIX/LINUX for servers and embedded systems to PalmOS and PocketPC for handheld devices.

We have created management applications, data collection middleware, database applications for imaging and network management and numerous other projects. For a more detailed presentation on what we can do to simplify your development please contact our sales staff.

Project Experience

Indx Software (a Siemens company) needed a protocol for data collection in an enterprise. The data was collected from differing sources in a distributed environment. Netaphor implemented a Java based solution for IndX and provided a mechanism to integrate this data into Microsoft Office.

Konica Minolta required a database implementation for document distribution. Netaphor created this implementation using Java and JDBC.

Safetran Systems (an Invensys company) asked Netaphor to create an SNMP based management system for monitoring data from a wireless spread spectrum radio network. The system allows Safetran to integrate its railroad management system into HP OpenView.

These are just some of the projects that we have worked on.

Benefits

We offer our customers a value proposition that is unmatched by our proven track record for delivering high quality systems on time.

Our **technical expertise and significant experience** in database middleware, network management, monitoring and control allows us to provide several applicable skill sets to tackle most custom software development projects. Our **approach**, which is **customer driven** and **results oriented**, and our **consistent execution** ensures **timely deliverables** of high quality.

Netaphor is a part of the **SBA 8(a) program**. Using Netaphor's services will give you an immediate return on your investment as well help in meeting any small business sub-contracting goals you may have.
